From the previous screen, an order is placed, and an invoice created. This is a simple database. You may choose to think about ways you could improve it.

3. Current Spreadsheet

The final and most crucial information system that Fibre uses is a spreadsheet (please see attached) that keep all the details of clients and sales PER brand. Fibre represent many different brands. The excel spreadsheet that you have access to here is the way they track brands. It is very inefficient.

The names and shop names have been removed but you can see what sort of information is stored in the spreadsheet. Think about your task for this assignment – how can you improve the IS?
